

Living Walls

Living Walls & Green Walls designed, installed and maintained by Scotscape for improved biodiversity, air quality & to mitigate the urban heat island.

Key Benefits

Living Walls are one of the best ways to reduce air pollution in cities

Research highlights the superior ability of living walls benefit improving air quality. The nature of city landscapes creates 'street canyons' which trap pollution at street level, living walls can increase the deposition rate by as much as 40% of nitrogen dioxide and 60% for particulate matter as the cleaner air from above the street canyons is introduced.

Scotscape selects the best plants to trap particulate matter (PM) to improve the health and well-being of city residents.

Our Vision

The Complete Green Solution

At Scotscape we're passionate about green infrastructure at every level.

As horticulturists, we're proud of our achievements in being globally responsible and bringing Green to urban solutions. Our landscapers' creative flair and knowledge, are backed up with service and an attention to detail that only comes from truly caring.

Our ground force gardeners nurture, advise and maintain, but still have time to share their passion for everything green.

When it comes to smart green technology, we are the most experienced 'living green' specialists in the UK, with a quality of aftercare that sets us apart from other urban greening companies.

We're proud of our teams and their passion, combining their expertise to deliver complete solutions for all your green requirements.
