

All together better

When you need your buildings to look their best you need a range of market-leading energy-efficient, architecturally designed PVC-U window, door, conservatory and roofline systems. Eurocell work closely with architects and designers to ensure we constantly meet your expectations on both an aesthetic and legislative level. Your input drives and shapes our product development and that means whether you're specifying window, door, conservatory or roofline products, Eurocell will meet and exceed your expectations.

Eurocell plc manufactures and distributes the widest product range of any PVC-U systems supplier in the UK. We produce a comprehensive choice of window, door, conservatory and roofline products in our 25,000m² state-of-the-art facilities, as well as a full range of essential ancillaries.

Quality controlled manufacturing

Quality is carefully controlled and monitored throughout the manufacturing process for all Eurocell products. We have our own toolmaking and laminating facilities, and all products are manufactured using raw materials from our own PVC-U compound mixing plant, giving us full control over product quality and consistency, right from the start.

Sustainable champions

We re-use almost 100% of our waste product in the manufacturing process, which amounts to almost 3,000 tonnes per year. That means virtually zero production waste goes into landfill. We also operate a technically advanced post-consumer PVC-U recycling plant in the UK, enabling us to recycle old window frames that would otherwise go to landfill. Our commitment to sustainability is demonstrated by our ISO14001 environmental management systems accreditation and our extensive use of recycled waste materials in our products.
